

# Satellite observations of Sea Surface Temperature as a Climate Data Record

C J Merchant\* and **J Kennedy\*\* (presenter)**

\*The University of Edinburgh

\*\*The UK Met Office

# SST from space: not 'old hat'

**“old hat”**: old-fashioned,  
over-used and over-familiar

- ▶ Reduced biases
- ▶ Stability / homogeneity
- ▶ Sensitivity
- ▶ Uncertainty information
- ▶ Independence

# A Tale of Two Projects

## ATSR Reprocessing for Climate (ARC)

- ▶ Completed June 2011
- ▶ ATSR series SSTs
- ▶ 1991 to mid 2011

For data:

- ▶ [www.neodc.rl.ac.uk/browse/neodc/arc](http://www.neodc.rl.ac.uk/browse/neodc/arc)

## Climate Change Initiative (SST CCI)

- ▶ Ongoing (in year 2 of 3)
- ▶ SST CDR user requirements
- ▶ New SST products in 2012
  - ▶ ATSRs and AVHRRs

For report:

- ▶ [www.esa-sst-cci.org](http://www.esa-sst-cci.org)

# Reduced biases

**Aggregated over all spatial scales**

Data level	Threshold	Break-through	Objective
2	0.1°C	0.05°C	0.01°C

**Requirements for acceptable level of bias to satisfy at least two thirds of the user group.**

# Stability / homogeneity

- ▶ Matters for change detection and trends
- ▶ Need low upper limit on trend artifacts in the record
  - ▶ E.g., drifting satellite calibration or overpass time
- ▶ Discontinuities should be negligible
  - ▶ E.g., jumps as different sensors come in and out of record
  - ▶ Bias correct SSTs with care!

Aggregated over all spatial scales			
Data level	Threshold	Break-through	Objective
2	0.05°C/dec	0.02°C/dec	0.01°C/dec
	5 mK/yr	2 mK/yr	1 mK/yr

# Stability assessment in ARC

- ▶ Assessed discrepancy between ARC SST<sub>1m</sub> and Global Tropical Moored Buoy Array (GT MBA) for trends

Region	Period	Time of day	Trend / mK yr <sup>-1</sup>	95% conf. int. / mK yr <sup>-1</sup>
Tropics	1993 - end	Day	-0.6	-2.6 < trend < 1.5
Tropics	1993 - end	Night	1.0	-1.4 < trend < 3.4

# Sensitivity to SST

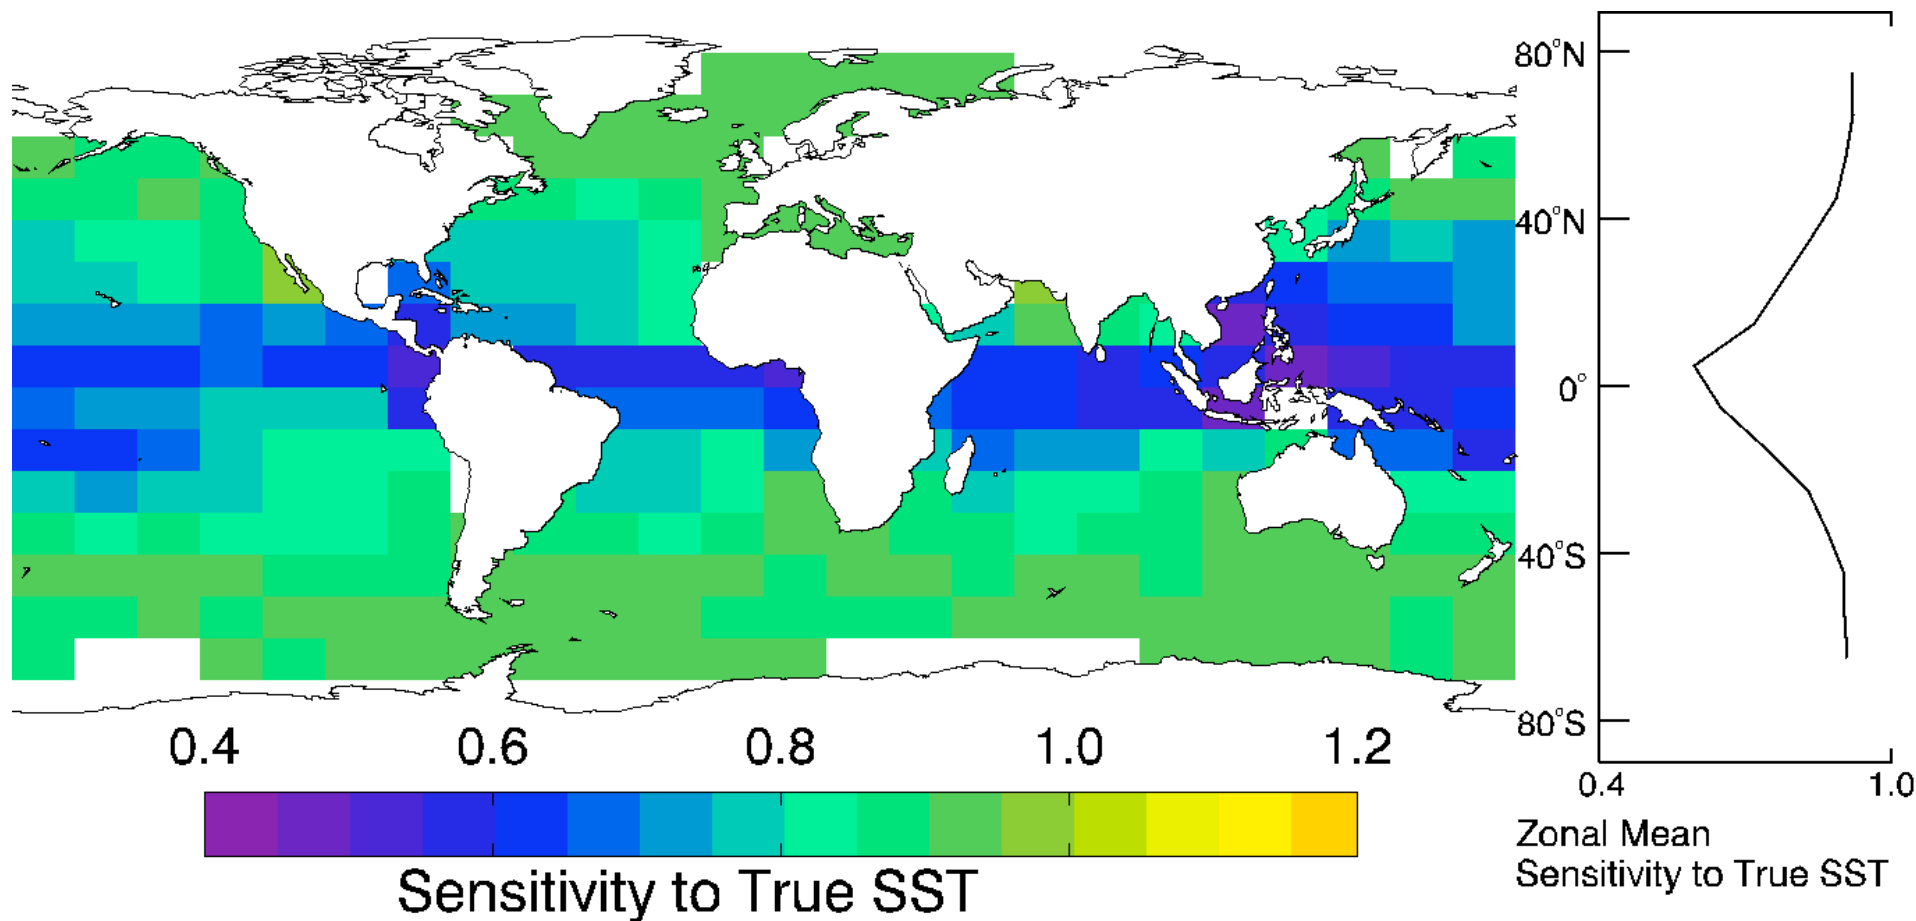

- ▶ Satellite retrieval of SST is a subtle inverse process
- ▶ Wherever prior information explicitly or implicitly enters the inverse process, the retrieved SST may not fully reflect SST variability
- ▶ Sensitivity to true SST variation should be a criterion for assessing SST CDRs
- ▶ Ideally  $\frac{\partial \hat{x}}{\partial x} = 1$  for a CDR
- ▶ Can be calculated using simulation of the inversion

# Typical AVHRR retrieval (NLSST)

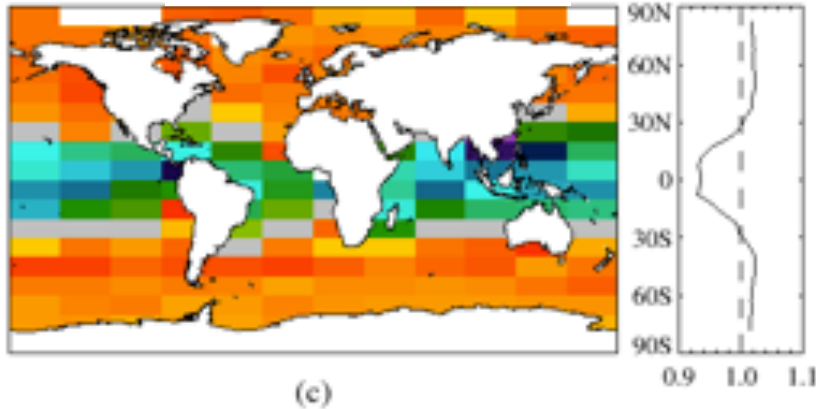

Change in AVHRR SST for a 1 K change in SST

Merchant et al, 2009, GRL  
doi:10.1029/2009GL039843

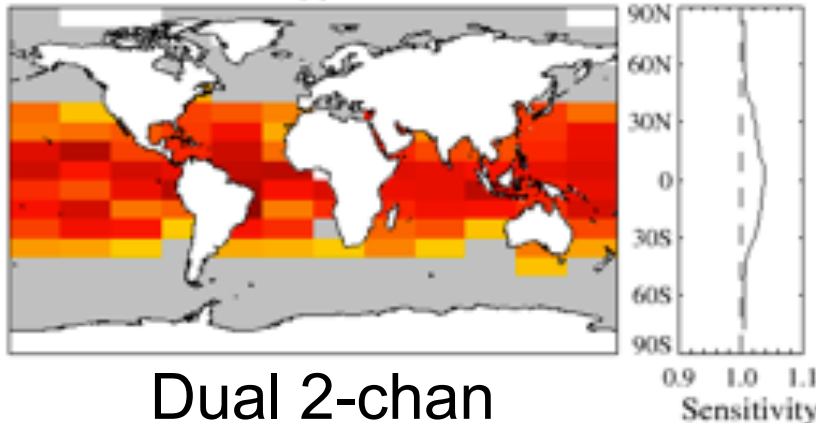

# Sensitivity in ARC SST

# Uncertainty information

- ▶ Need to improve uncertainty information in satellite SST datasets for climate users
- ▶ Within ARC and the SST CCI an uncertainty is attached to every SST
- ▶ Uncertainty model accounts for
  - ▶ Propagated radiometric noise
  - ▶ Knowledge (from simulation studies) of the limitations of the retrieval algorithm
  - ▶ Sub-sampling (observations are gappy due to clouds)
- ▶ The uncertainty needs to be validated too

# Validation of ARC uncertainty estimates

# Independence

- ▶ In the SST CCI survey of climate users
  - ▶ 15% stated that it was essential for satellite SST CDR to be independent of *in situ* SST
  - ▶ 45% stated it was preferable
  
- ▶ To retrieve SST independently of *in situ* SST
  - ▶ Need to do retrieval by radiative transfer
  - ▶ Need excellent characterisation of sensor
  
- ▶ For ARC SSTs
  - ▶ Skin SST retrieval algorithm is fully independent of *in situ* SST
  - ▶ Cloud screening is weakly dependent on *in situ* SST

---

- ▶ ▶ Skin to depth model used *in situ* in parameter tuning

# Nearly-independent time series

# Summary

- ▶ Climate users require lower SST biases (0.1 K or better) than are found in traditional meteorological SST products
- ▶ Stability is a key parameter. Excellent stability (mK/yr) is possible for ATSRs with careful exploitation of overlaps
- ▶ Sensitivity (or, equivalently, the amount of prior SST information embedded in CDR) should be quantified
- ▶ Uncertainty estimates should be part of the SST CDR and can be validated in their own right
- ▶ ARC SSTs are nearly independent of in situ observations, yet confirm the evolution of global SSTA in HadSST3

# Acknowledgements

- ▶ **ARC was funded by UK agencies:**
    - ▶ Natural Environment Research Council
    - ▶ Defence Science and Technology Laboratory
    - ▶ Department of Energy and Climate Change
  - ▶ **SST CCI is funded by the European Space Agency**
    - ▶ and builds on both ARC and work funded via the UK's National Centre for Earth Observation (NCEO)
  - ▶ **A few of the **many** contributing scientists are:**
    - ▶ Owen Embury      Gary Corlett      Lizzie Good
    - ▶ Nick Rayner      Roger Saunders      David Llewellyn-Jones
    - ▶ David Berry      Liz Kent      Katie Lean
- 
- ▶ ▶ Pierre Le Borgne

## Further Information

- ▶ I will be standing by standing by my poster in session C34  
10:30-12:00 Wednesday
- ▶ If you are interested in using the CCI data for the user  
assessment email:
