# Mechanisms: Solar Influence on Climate

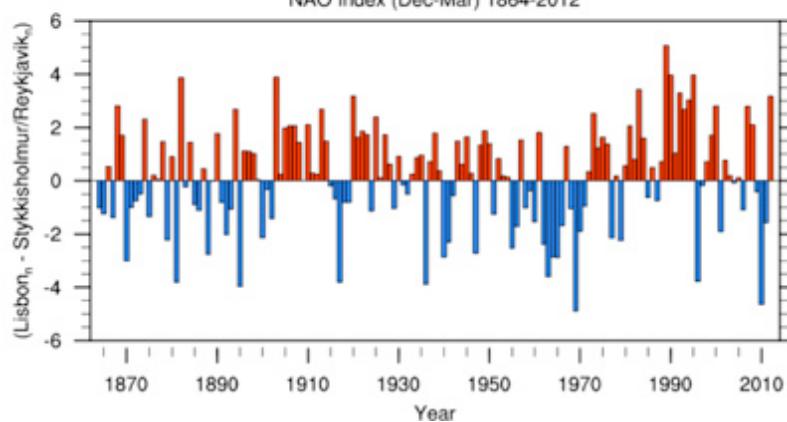

# Sources of Decadal Climate Variability

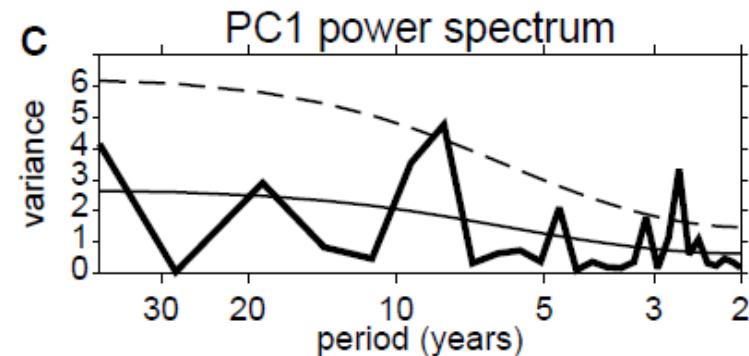

- External: Solar Cycle
- Internal: NAO, AMOC

Matthes et al. (2017)

Pages/NAO\\_small.jpg](http://www.clivar.org/sites/default/files/images/Pages/NAO_small.jpg)

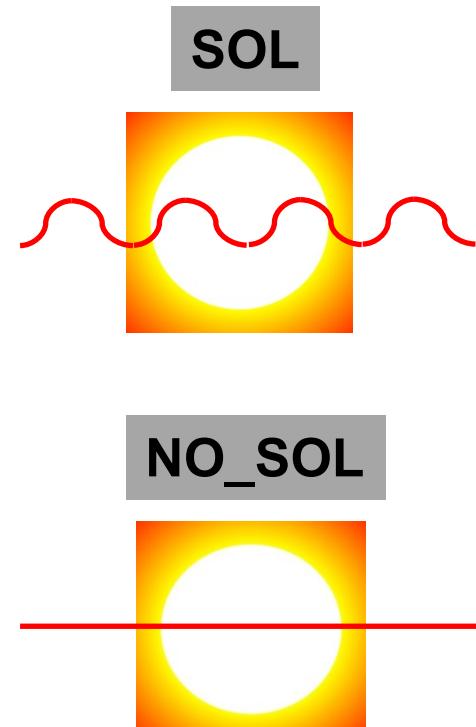

Thiéblemont et al. (2015)

# GEOMAR Model Experiments

2 Model Experiments  
(145 years)

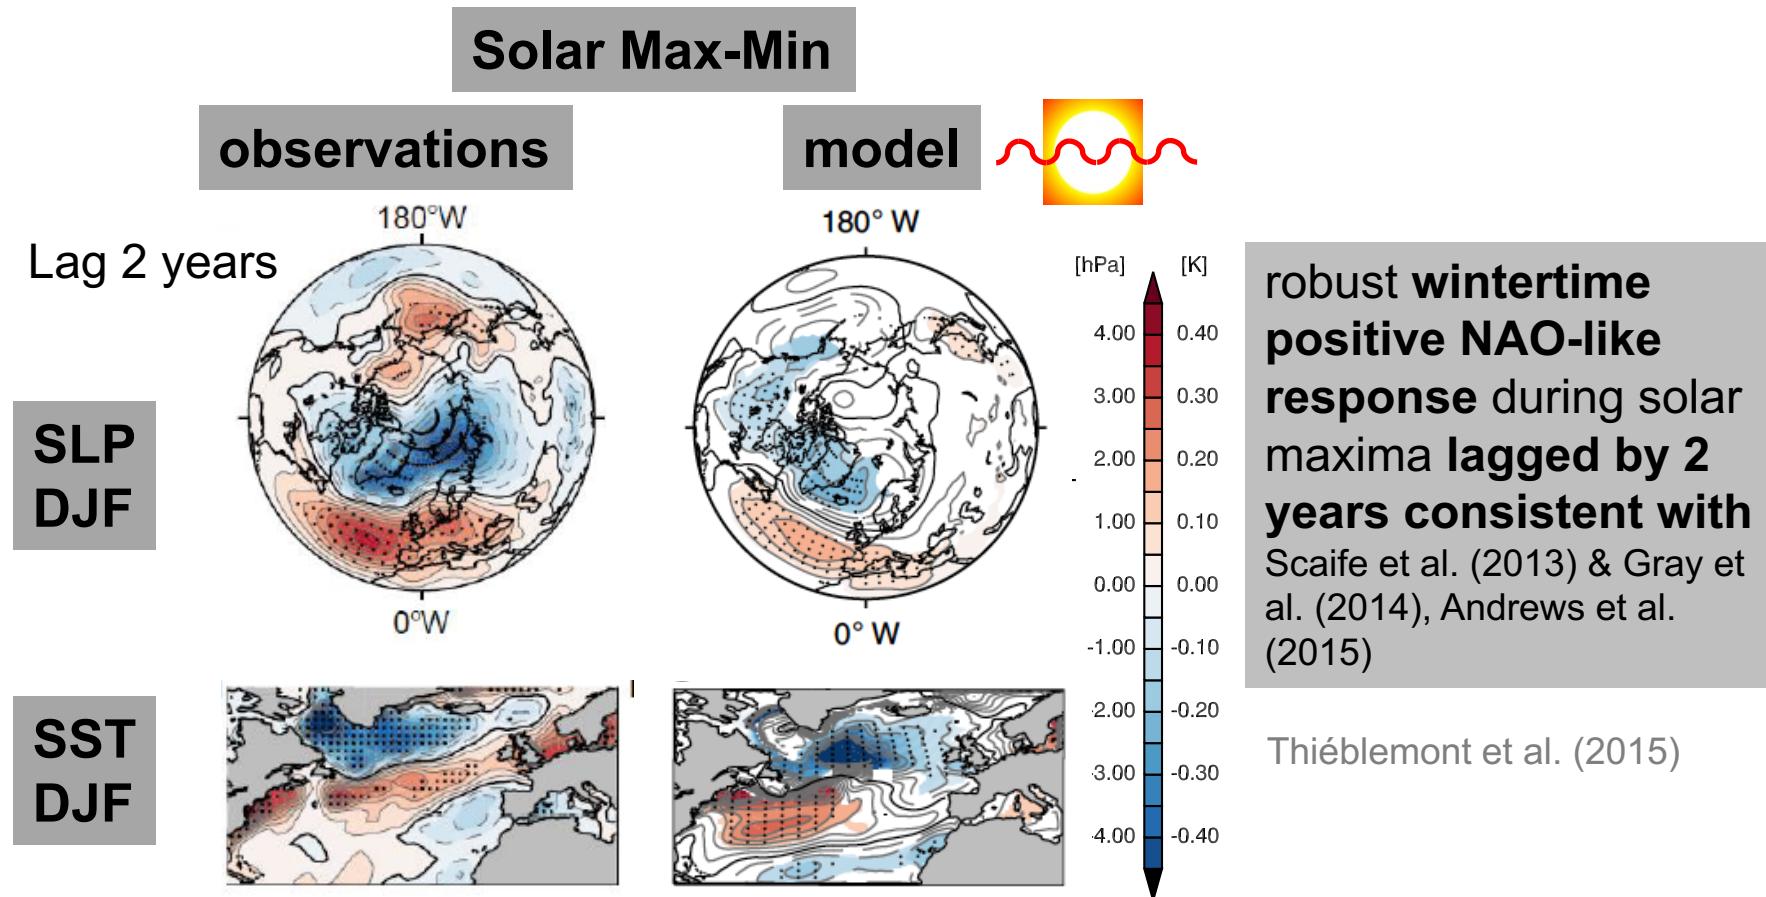

No climate change conditions (GHGs+ODS 1960ies)

# Regional Solar Surface Signal

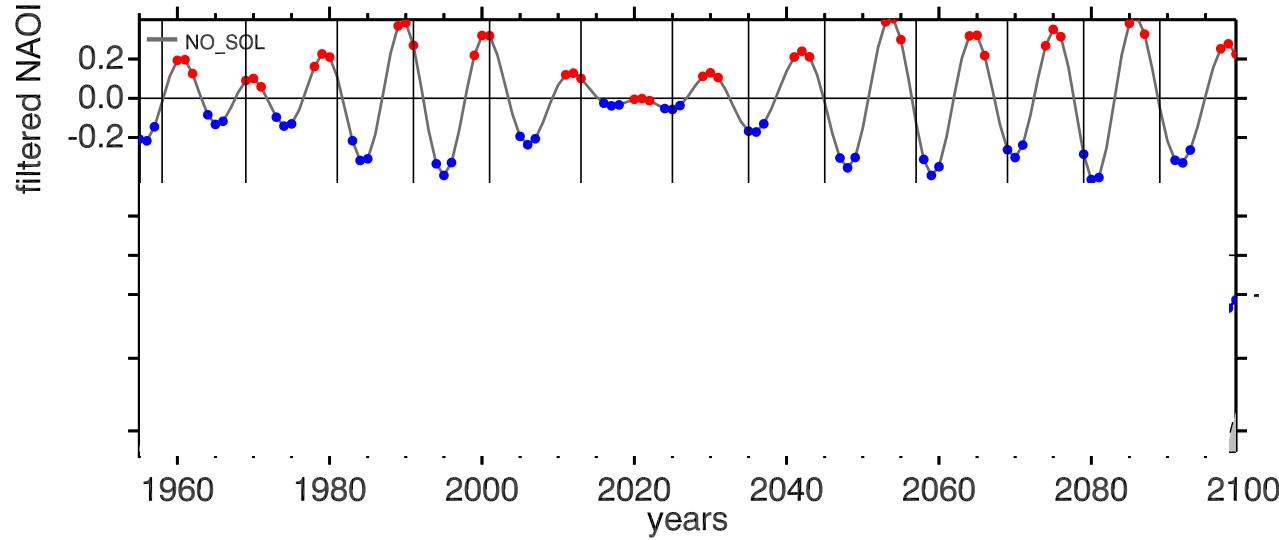

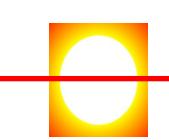

GEOMAR

Surface signal contribution from **solar irradiance and particle forcing, interactive chemistry, and atmosphere-ocean coupling.**

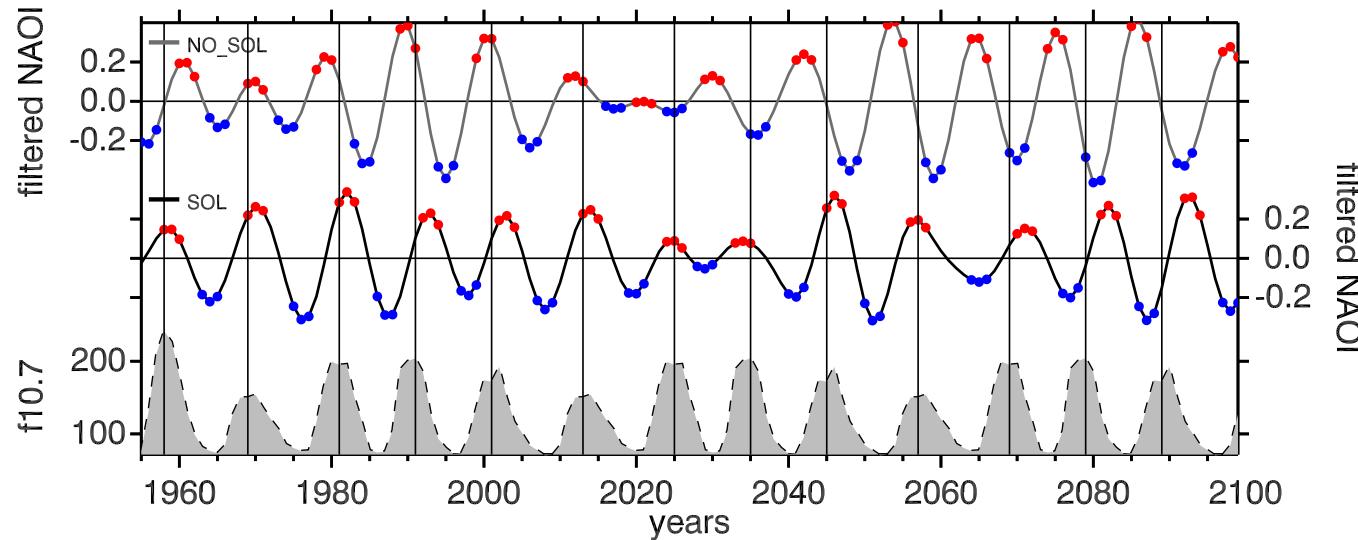

# Quasi-Decadal NAO Fluctuations without Solar Cycle

Thiéblemont et al. (2015)

CESM-WACCM experiment without solar cycle forcing shows  
quasi-decadal NAO fluctuations

# Synchronization of the NAO by the Solar Cycle

Switching **solar variability** in CESM-WACCM on **synchronizes quasi-decadal NAO fluctuations** with the solar cycle, maximizes 1-2 years after solar peak

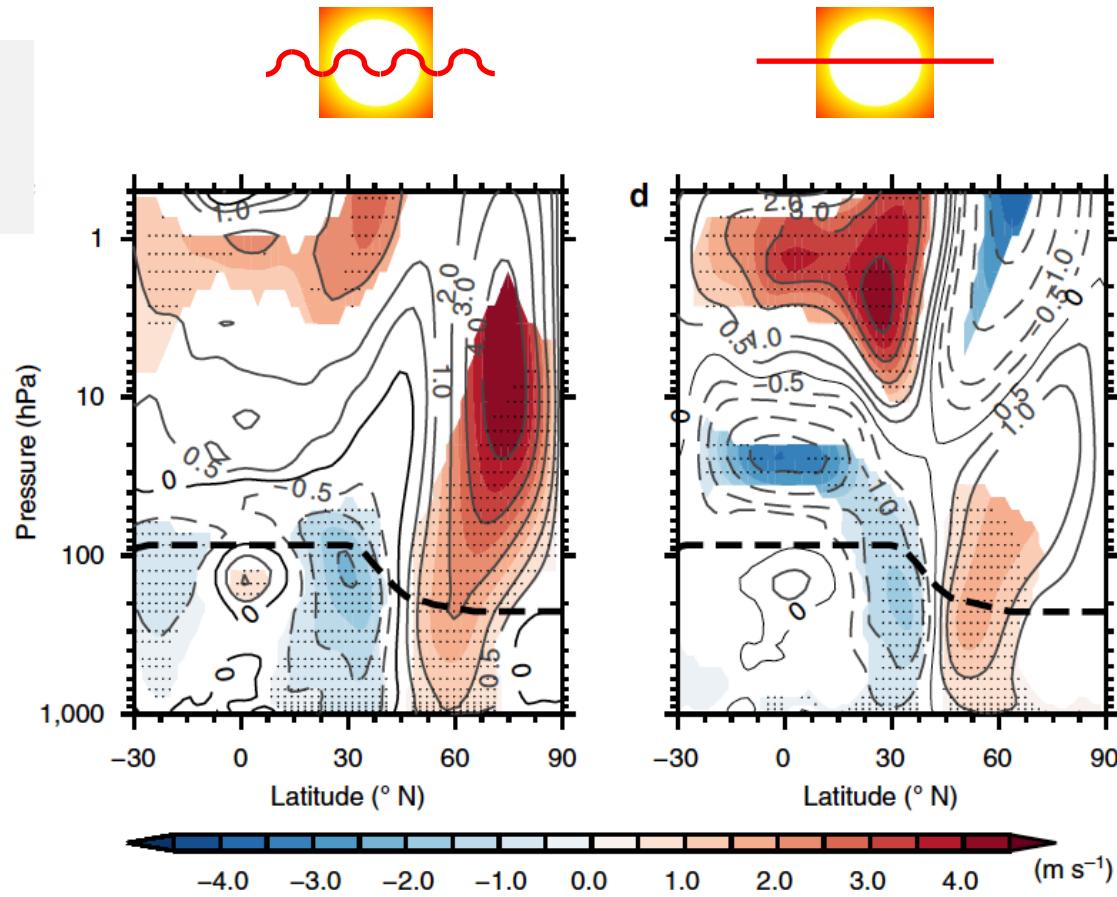

Thiéblemont et al. (2015)

# Synchronization by Stratosphere-Troposphere Coupling

NAO-based composites  
Max-Min at lag -1  
Zonal mean zonal wind

DJF

Synchronization  
consistent with „top-down“ mechanism

# Concluding remarks

- **Solar cycle synchronizes NAO quasi-decadal internal variability mode in model ⇔ stratospheric influence and ocean-atmosphere coupling crucial**

GC: Near-Term Climate Prediction

- **Solar cycle offers skill to improve quasi-decadal regional climate predictions**

(Kushnir et al., 2018, submitted)
