CHFP2: A coupled multi-seasonal forecast system for Canada

Bill Merryfield

*Canadian Centre for Climate Modelling and Analysis
Victoria, BC*

In collaboration with:

Woo-Sung Lee, Slava Kharin, George Boer, John Scinocca, Greg Flato (CCCma)

Juan-Sebastian Fontecilla, Jacques Hodgson, Bertrand Denis, Benoit Archambault,
Louis-Philippe Crevier, Lewis Poulin (CMC)

WMO Global Producing Centres for Long-Range Forecasts

GPC	System Configuration.	Atmospheric Model Resolution	Hindcast Period	Year of Implementation
Washington, NCEP	Coupled	T126/L64	1982-2010	Summer 2011
ECMWF	Coupled	T255/L92	1981-2010	Late Fall 2011
Montreal, CMC	Coupled	2 Models T63/L31 T63/L35	1981-2010	Late Fall 2011
Tokyo, JMA	Coupled	T95/L40	1979-2008	2010
Exeter, Met Office	Coupled	1.875x1.25/L38	1981-2002	2009
Toulouse, Météo-Fr	Coupled	T63/L91	1997-2007	2008
Beijing, BCC	Coupled	T63/L16	1983-2004	2005
Melbourne, BoM	Coupled	T47/L17	1980-2006	2002
Montreal, CMC	2-tier	4 Models	1969-2004	2007 to be retired in 2011
Seoul, KMA	2-tier	T106/L21	1979-2007	1999 ?
Cachoeira Paulista, CPTEC	2-tier	T62/L28	1979-2001	2009
Moscow, HMC	2-tier	1.1x1.4/L28	1979-2003	2007
Pretoria, SAWS	2-tier	T42	1982-2001	2007

The screenshot shows the Weatheroffice website interface. At the top, there is a navigation bar with links for Français, Home, Contact Us, Help, Search, and canada.gc.ca. Below the navigation bar, the URL www.weatheroffice.gc.ca is displayed. The main content area features a title "Temperature and Precipitation Deterministic Forecasts" followed by a table of links for different forecast periods. The table has two rows: one for Temperature and one for Precipitation, each with five columns corresponding to 1-3 month, 2-4 month, 4-6 month, 7-9 month, and 10-12 month periods. Red ovals highlight the first two columns (1-3 month and 2-4 month) under both Temperature and Precipitation. Blue ovals highlight the last three columns (4-6 month, 7-9 month, and 10-12 month) under both Temperature and Precipitation. Below this section, another title "Temperature and Precipitation Probabilistic Forecasts" is shown, followed by a similar table for probabilistic forecasts. Red ovals highlight the first two columns (1-3 month and 2-4 month) under both Temperature and Precipitation for the probabilistic forecasts. The word "Dynamical" is written in red on the left side, pointing towards the deterministic forecasts. The word "Statistical CCA" is written in blue on the right side, pointing towards the probabilistic forecasts.

CHFP2 development

CHFP2 = “Coupled Historical Forecasting Project, phase 2”

- 2006 Funding from Canadian Foundation for Climate and Atmospheric Sciences (CFCAS)
- 2007-2008 CHFP1 pilot project (existing AR4 model, simple SST nudging initialization)
- 2008-2009 Model development leading to CanCM3/4, CHFP2 initialization development
- 2009-2010 CHFP2 hindcast production
- 2011 CHFP2 operational implementation
