

WCRP Workshop on Extremes in Climate Prediction Ensembles (ExCPEns)

- **Online from APEC Climate Center
25-27 October 2021**
- **Early Career Scientist training and discussion forum
27-28 October 2021**

The focus of this workshop is exploiting subseasonal, seasonal, annual to decadal and longer-term prediction ensembles to improve the prediction and understanding of extreme weather and climate events.

Sessions:

1. Identification of extremes in observations and climate prediction ensembles
2. Physical mechanisms of extremes in observations and climate prediction ensembles
3. Regional climate extreme information relevant to impacts, vulnerability and adaptation
4. Prediction and predictability of large-scale climate variability relevant to extreme events
5. Prediction and predictability of specific extreme events (>10 days)
6. Quantifying current and future risks of climate extremes
