AMV impacts on climate

Atlantic Multidecadal Variability (AMV)

- Droughts over N. and S. America
- Europ. summer temperature
- Sahel drought
- Arctic sea-ice
- Occurrence of weather extremes
- Tropical cyclone activity

Motivations:

AMV and impacts possibly predictable multiyear ahead

Limits:

Too short historical records

→ AMV teleconnections not fully understood

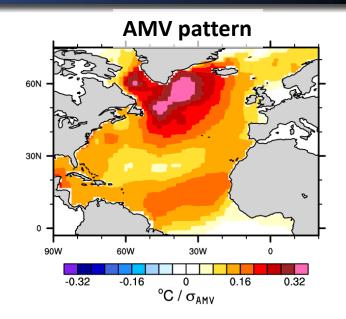

Hiatus

Experimental design

North Atlantic SSTs (5°N-70°N) restored to the **observed AMV pattern** with a 5/15-day restoring time scale

10yr long large ensemble experiments

Free ocean-ice-land-atmosphere interactions outside the Atlantic

AMV+ ensemble: daily North Atlantic SST $\overline{\ \ \ }$

daily Climatology + AMV pattern

AMV- ensemble: daily North Atlantic SST

daily Climatology - AMV pattern

GFDL-CM2.1 = 1° ocean / **200km** atmo \rightarrow 100 members

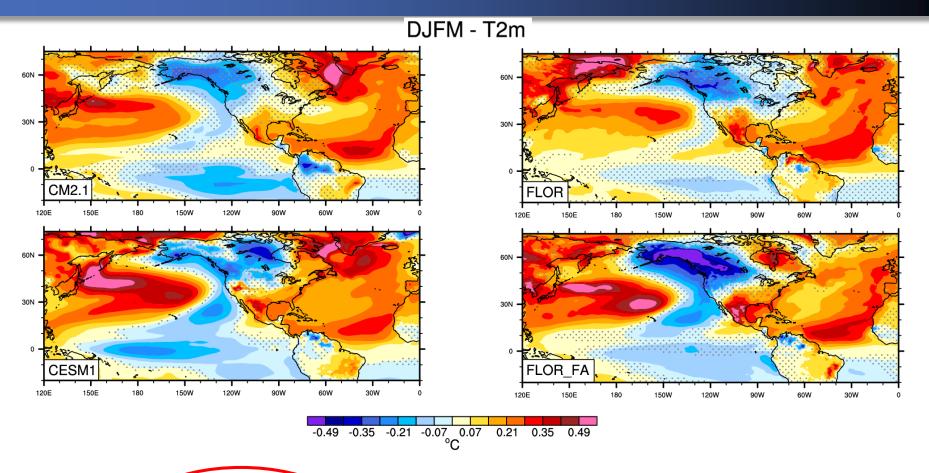

NCAR-CESM1 = 1° ocean / **100km** atmo \rightarrow 30 members

GFDL-FLOR = 1° ocean / **50km** atmo \rightarrow 50 members

GFDL-FLOR_FA = GFDL-FLOR + surface flux adjustment to reduce mean SST biases

Protocol adopted by Decadal Climate Prediction Panel of CMIP6 (Boer et al. GMD 2016)

AMV impacts on Pacific

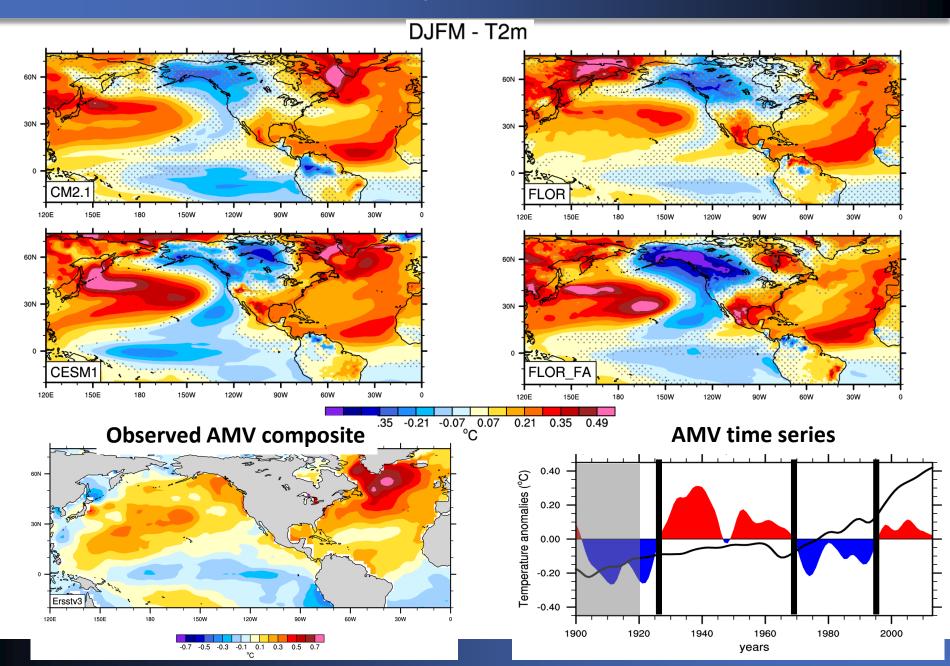

Response

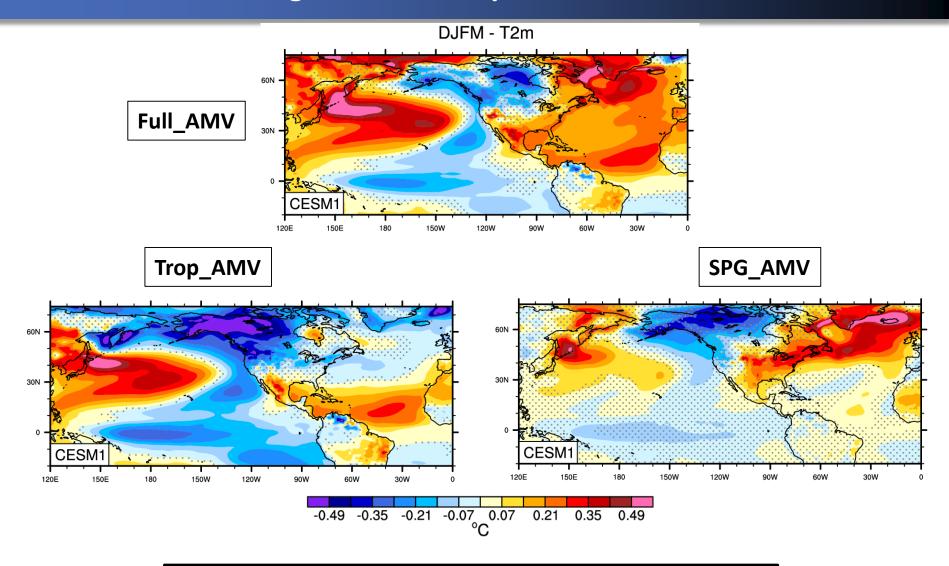

AMV+ minus AMV-

AMV+ leads negative phase of Interdecadal Pacific Oscillation

AMV impacts on Pacific

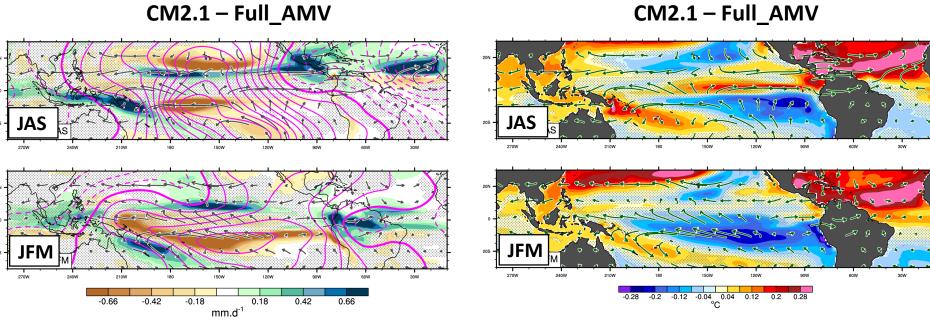

Origins of AMV impacts on Pacific

Tropical part of AMV forces Pacific response

AMV impacts on Pacific: mechanism

Colors: precipitation

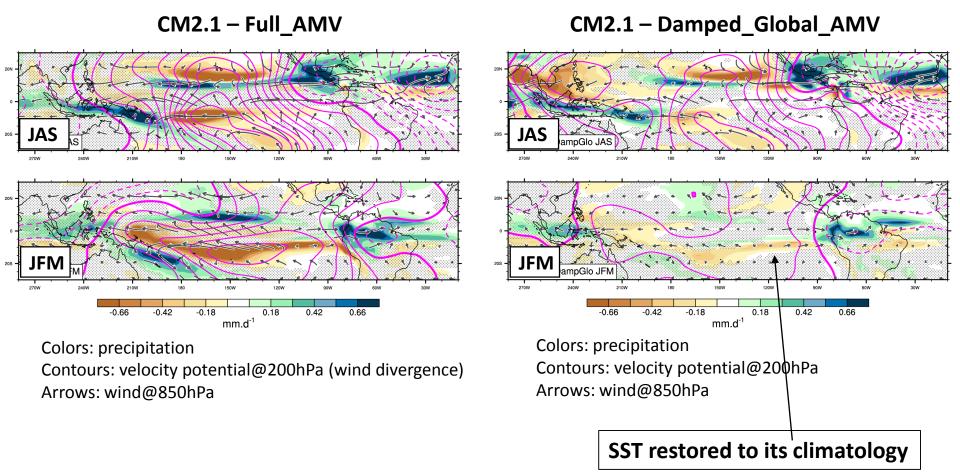

Contours: velocity potential@200hPa (wind divergence)

AMV impacts on Tropical Cyclones

Conclusion

- AMV+ drives IPO- response:
 - tropical Atlantic = main driver
- La-Nina like response during winter:
 - delayed adjustment to summertime Walker circulation changes
 - → Need coupled model to capture such a response.

Similar impacts between CM2.1, CESM1, FLOR, FLOR_FA

AMV impacts on TC match observed one in FLOR_FA not in FLOR

Need to correct mean SST biases to capture the observed signal

- ➤ AMV+ drives TC+ over Atlantic → SST and Wind Shear (+ humidity?)
- ➤ AMV+ drives TC- over Pacific → Wind Shear and Vorticity

Ruprich-Robert et al. (2017): Assessing the climate impacts of the observed AMV using the GFDL-CM2.1 and NCAR CESM1 global coupled models. J. Clim.

Ruprich-Robert et al.: Impacts of the AMV on tropical climate and tropical cyclone activity. In prep.
