CMIP5 simulations at CMCC

The simulations refer to the CMIP5 experiment description as detailed by Taylor et al. 2008

Numbers (#) correspond to the document:

http://cmip-pcmdi.llnl.gov/cmip5/docs/Taylor_CMIP5_design.pdf

#	Simulation	CMCC-CESM	CMCC-CMS	CMCC-CM
3.1	Pre-industrial control	X	X	X
3.2	Historical (1850-2005, coupled model)	X	X	X
3.3	AMIP (1979-2008, atmosphere model)		X	X
4.1	RCP4.5 2006-2100		X	X
4.2	RCP8.5 2006-2100	X	X	X
6.1	Idealized +1%CO ₂ /yr			X
1.2	Decadal Predictions		ongoing	X

CMCC-CM : **Standard AOGCM** : T159L31

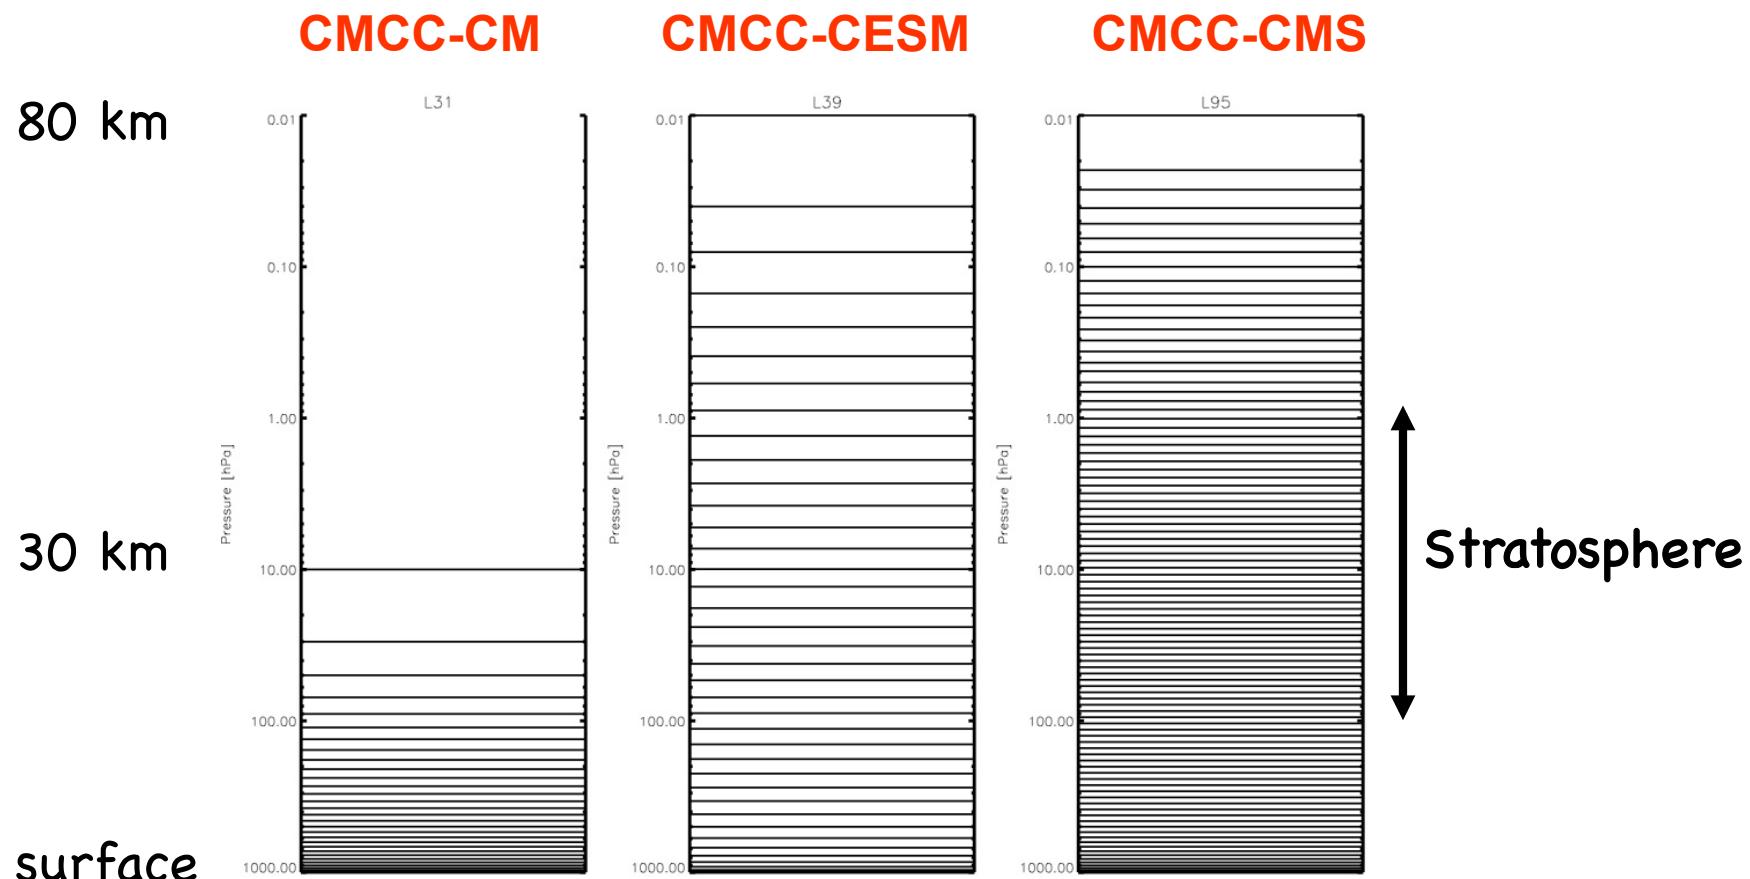

CMCC-CMS :AOGCM + well resolved **stratosphere** : T63L95

CMCC-CESM: **Earth System Model** T31L39

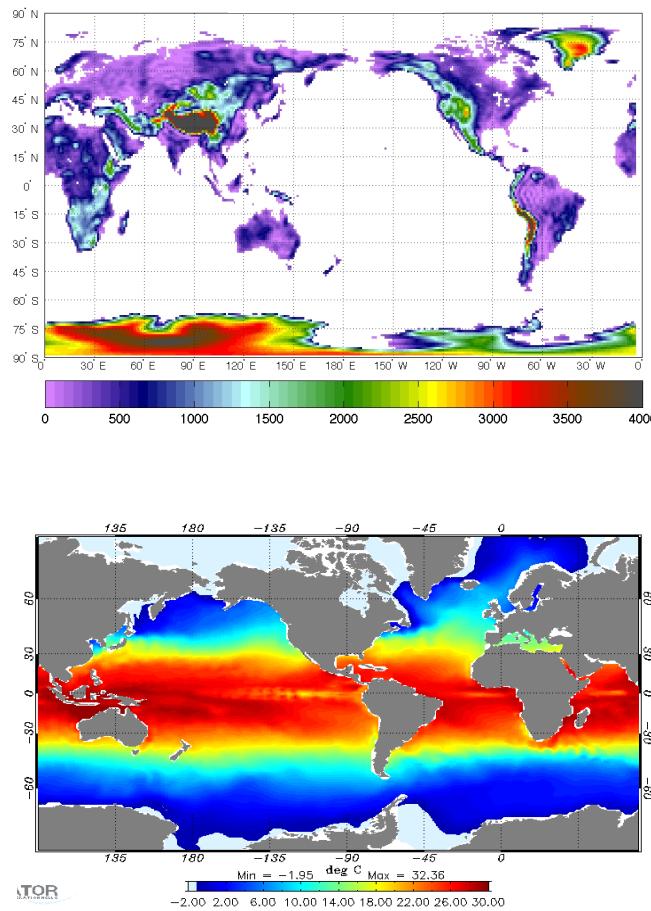

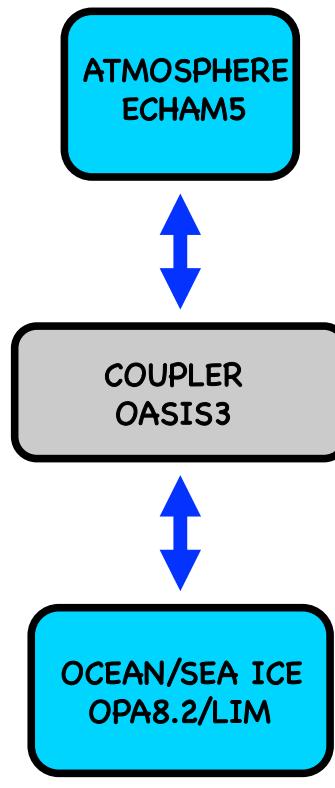

All AGCMs coupled to OPA8.2 (ORCA2) + LIM

CMCC-CMS: stratosphere-resolving CGCM

- T63L95 MAECHAM5 (Manzini et al 2006, Giorgetta et al 2006)
- Updated shortwave radiation Scheme (Cagnazzo et al 2007)

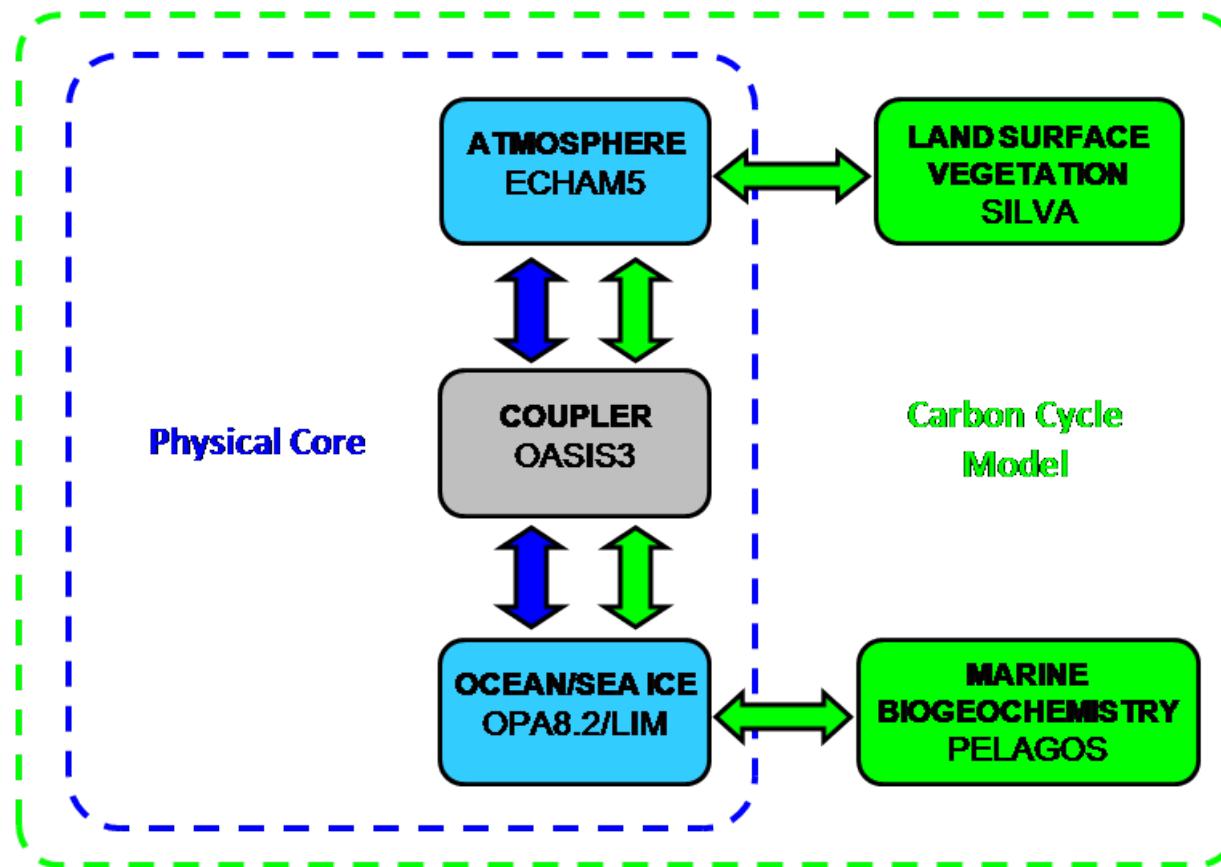

CMCC-CM : AOGCM CMCC Climate Model

- High resolution global atmosphere (~80 Km) : improved representation of regional scale features, with respect to previous (AR4) SXG AOGCM.

CMCC-CESM Carbon Cycle Earth System Model

ECHAM5 (Roeckner et al. 2003, 2006); SILVA (Alessandri 2006);
OASIS3 (Valcke 2006);
OPA8.2 (Madec et al. 1999);
PELAGOS (Vichi et al. 2007)

Resolution: T31L39

Stratospheric Component.

Top at 80 km, **39 vertical levels**

Momentum conserving orographic and non-orographic gravity wave scheme [Manzini et al., 2006]

CMCC-CMS Climate Model with the Stratospheric Component

Physical Core. **ATMOSPHERE :** ECHAM5 (Roeckner et al. 2003, 2006); Coupler: OASIS3 (Valcke 2006); **Ocean:** OPA8.2 (Ocean Parallelise Madec et al. 1999), Resolution ORCA2L31; **LIM** (Louvain-la-Neuve sea Ice Model, Fichefet and Morales-Maqueda 1997) is a thermodynamic sea ice model directly coupled with OPA8.2. Fogli et al. 2009 (for the coupling)

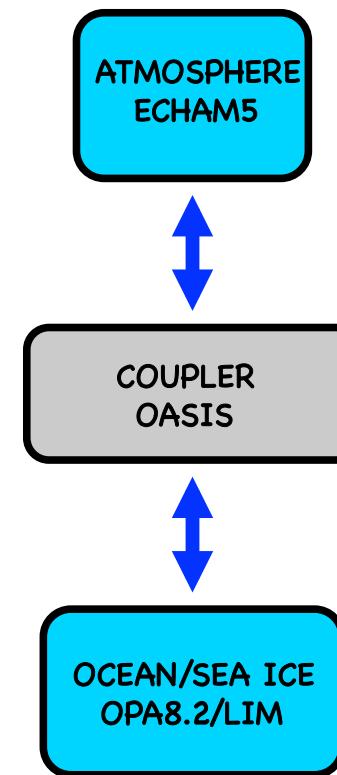

Resolution: T63L95

Stratospheric Component.

Top at 80 km, **95 Vertical Levels**, High vertical resolution: 44 levels between 100 and 1 hPa

Momentum conserving orographic and non-orographic gravity wave scheme [Manzini et al., 2006]

The Model has a spontaneous QBO

Successes,difficulties,plans,recommendations,
science gaps and new questions that have emerged
related to how formulate a possible CMIP6

Successes, difficulties, plans, recommendations,
science gaps and new questions that have emerged
related to how formulate a possible CMIP6

To produce a **statistics of downloaded variables** from
CMIP5 archive may help in assessing the real demand of
climate models data from users

Successes, difficulties, plans, **recommendations**, science gaps and new questions that have emerged related to how formulate a possible CMIP6

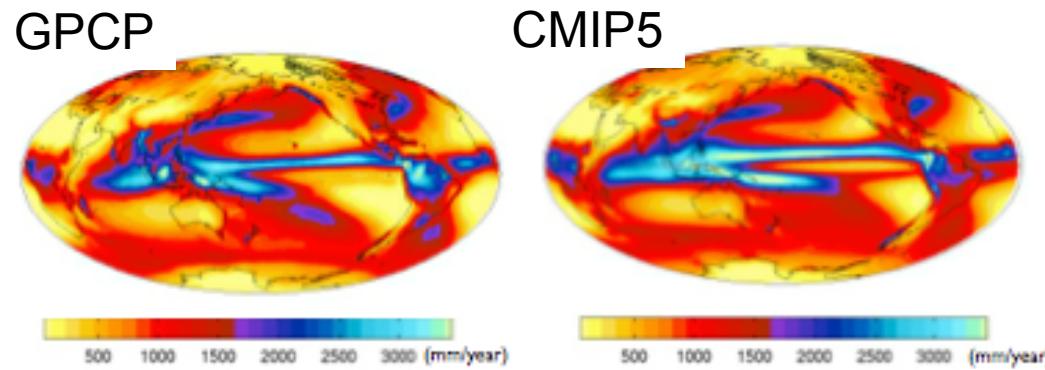

- To produce a **statistics of downloaded** variables from CMIP5 archive may help in assessing the real demand of climate models data from users
- To promote **CMOR as a standard protocol** for climate data format (i.e., GCM output directly saved into CMOR format): it would facilitate the (very time-consuming) post-processing stage

Successes,difficulties,plans,**recommendations**,
science gaps and new questions that have emerged
related to how formulate a possible CMIP6

- To produce a **statistics of downloaded** variables from CMIP5 archive may help in assessing the real demand of climate models data from users
- To promote **CMOR as a standard protocol** for climate data format (i.e., GCM output directly saved into CMOR format): it would facilitate the (very time-consuming) post-processing stage
- **Facilitate download of data** from CMIP5 archive! (CMIP3 was much easier...)

Recommendations/Suggestions for CMIP6 (Priority Actions)

- 1) To use the CMIP5-CMIP6 interval to tackle the **models' systematic error reduction**....in a (more) systematic way!
Some “historical” biases particularly reluctant to go away...
(double ITCZ?) : **GRAND CHALLENGE #7?**

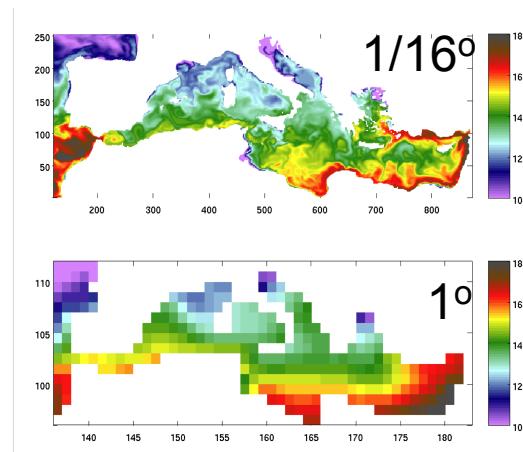

Put bias reduction at the top of the agenda.

Recommendations/Suggestions for CMIP6 (Priority Actions)

1) To use the CMIP5-CMIP6 interval to tackle the **models' systematic error reduction**...in a (more) systematic way!
Some “historical” biases particularly reluctant to go away...
(double ITCZ?)

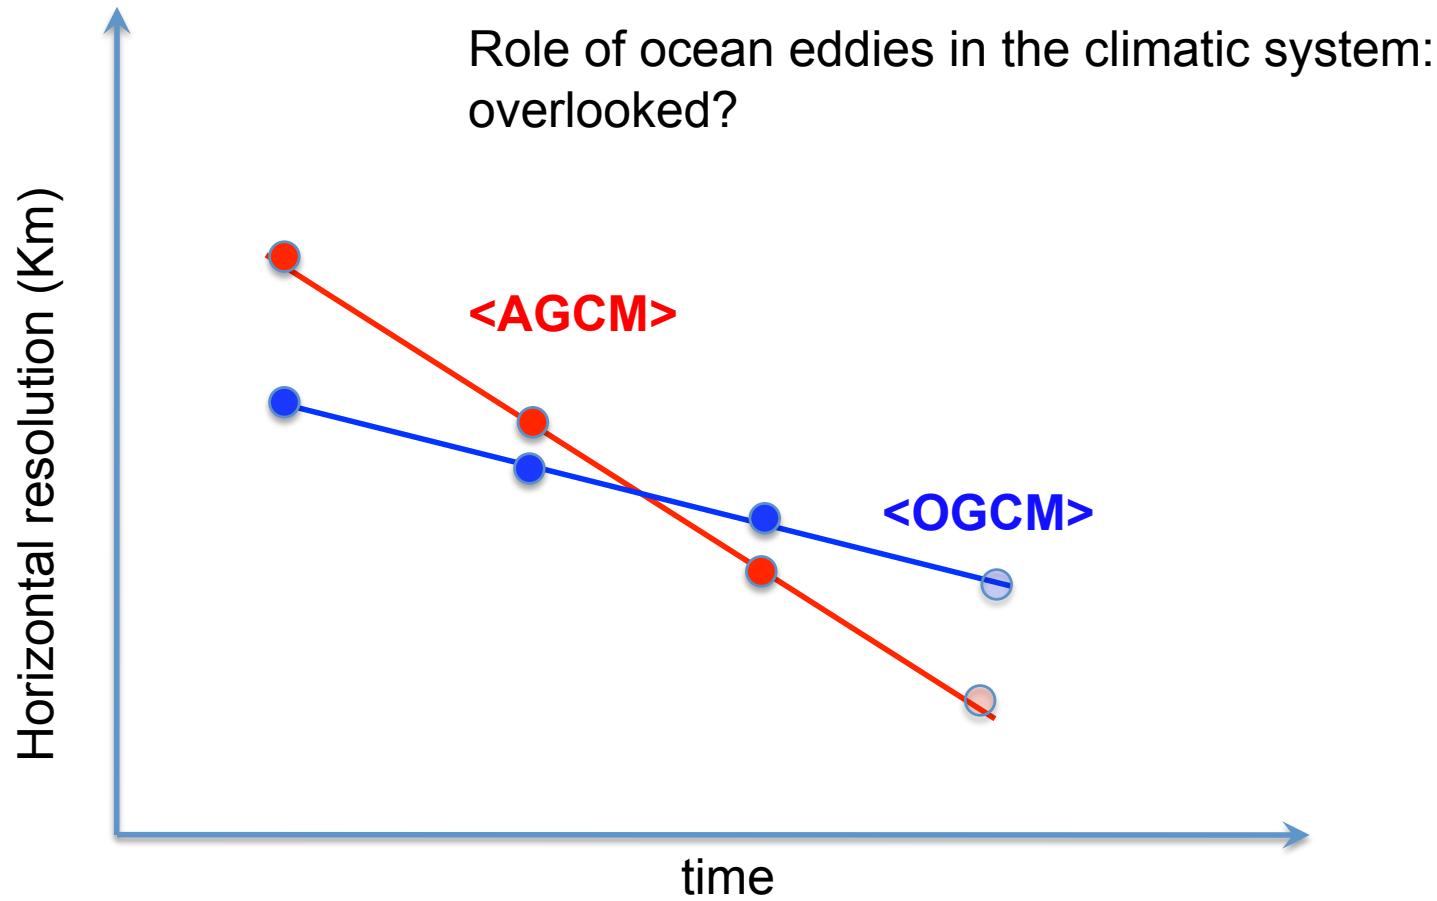

2) **(Mesoscale) Turbulence in the ocean.**

Current generation of OGCMs in CMIP coupled models
do still provide a **“laminar” representation of the ocean state.**

turbulent ocean (7 Km)

smooth, laminar flow (100 Km)

The **rate of spatial resolution refinement in AGCMs was faster than in OGCMs?**
The inclusion of mesoscale turbulence in the oceanic component of global CGCMs may have a dramatic impact on our current vision of climatic processes (THC, energy transfer at the air-sea interface, interaction with marine biogeochemical cycles..)

Thanks!
