

# BESM/INPE

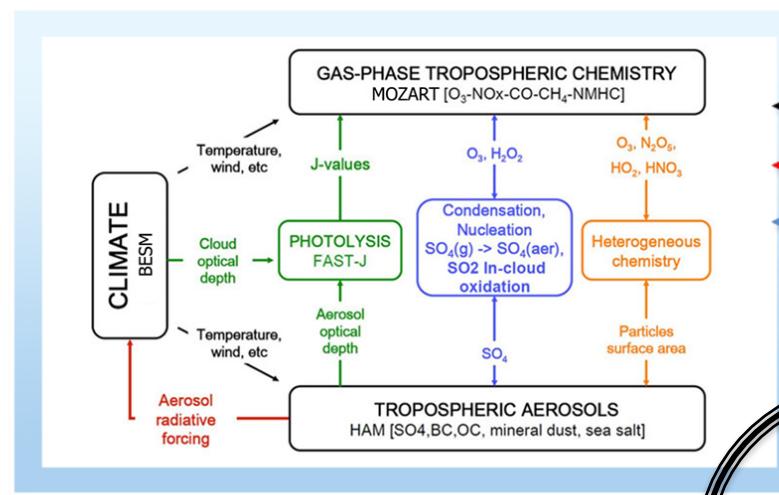

# Brazilian Earth System Model

Paulo Nobre  
National Institute for Space Research – INPE  
Cachoeira Paulista, SP, Brazil

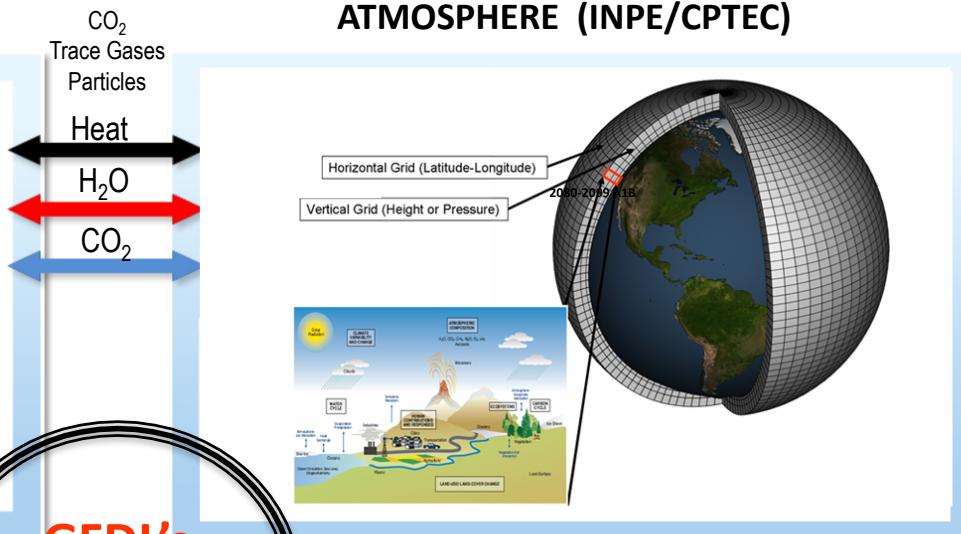

For WGCM meeting on CMIP6  
04 October 2014

# BESM Component Models

## ATMOS CHEMISTRY (HAMMOZ - MPI)

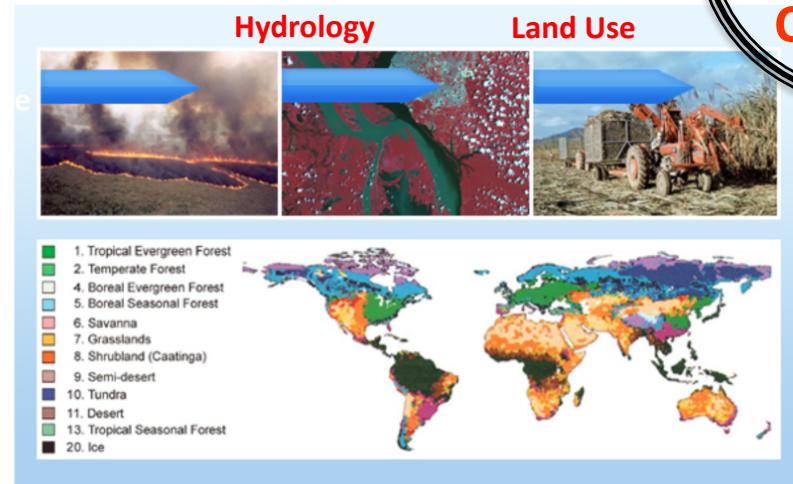

## ATMOSPHERE (INPE/CPTEC)

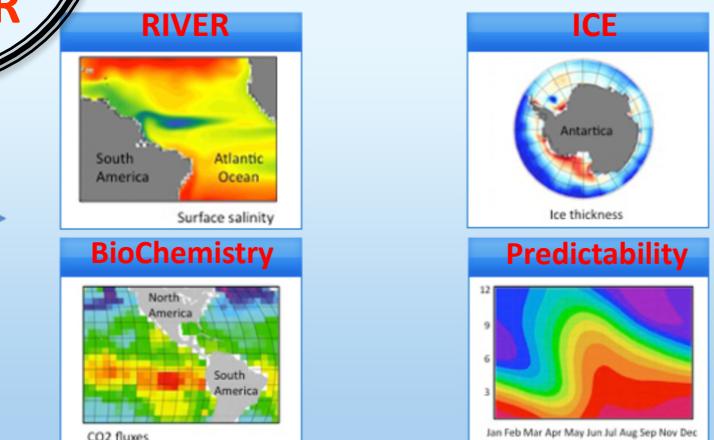

GFDL's  
FMS  
COUPLER

## LAND (IBIS – INPE/CCST)

RIVERS

## OCEAN (MOM4p1 – NOAA/GFDL)

# BESM component models:

- **Atmos**: CPTEC global spectral model, originated from COLA model, with new physical parameterizations (deep and shallow cumulus convection, short and longwave radiation, RRTMG, modified CLIRAD);
- **Ocean**: GFDL's MOM4p1 with marine ice and biogeochemistry; River discharges;
- **Surface**: INPE's version of NCAR's IBIS with improved representation of tropical biomes, forest fires and continental hydrology;
- **Chemistry/Aerosol**: from MPI HAMMOZ implemented at INPE's AGCM.
- **Coupler**: Hourly coupling via GFDL's FMS.

# INPE's CMIP6 Resources

- BESM
  - CPTEC AGCM
  - GFDL OGCM
  - INPE's IBIS
  - MPI HAMMOZ
  - GFDL FMS coupler
- Resolution (up to):
  - Atmos T266L64
  - Ocean  $\frac{1}{4} \times \frac{1}{4}$  L64
  - Surface  $1/10 \times 1/10$ .
